

WHAT IS CLAIMED IS:

1. An electrostatic-capacitance-type coordinate input device comprising an input sensor formed in such a manner
5 that an X electrode layer and a Y electrode layer for detecting electrostatic capacitance are multilayered on a flexible substrate,

wherein said input sensor is bonded on the rear surface of an insulating support plate for supporting said input
10 sensor.

2. An electrostatic-capacitance-type coordinate input device according to Claim 1, wherein a recess to which the input sensor is fitted is formed on the rear surface of said
15 support plate at a position where said input sensor is bonded.

3. An electrostatic-capacitance-type coordinate input device according to Claim 1, wherein a pointing section for pointing the position of said input sensor is formed in said
20 support plate.
